George Kalashlinskyi

250-702-2460 | hkalashl@uwaterloo.ca | LinkedIn | GitHub | Portfolio

Education

University of Waterloo — Waterloo, ON
Bachelor of Mathematics, Mathematical Finance — *Expected June 2028*
Relevant Coursework: Financial Mathematics, Macroeconomics, Microeconomics, Calculus I/II, Linear Algebra I/II
Certification: Bloomberg Market Concepts (BMC)
GPA: 75/100

Experience

Manulife — Sept. 2026 – Dec. 2026
Intern/Co-op, Global Hedging ALM — *Toronto, ON*

- Built an interactive Excel risk analytics tool using SQL and Python to analyze 30 derivative and portfolio metrics across 10 years of data, reducing time spent on error checks by 40%.
- Supported risk management for a $35 billion hedging portfolio by analyzing derivative positions and equity, interest-rate, and foreign-exchange exposures, including their effects on liability valuations and hedging requirements.
- Developed an AI-enabled workflow to analyze daily financial data, reducing securities and risk mapping errors by 25%.
- Presented quarterly analysis to stakeholders including our VP, translating quantitative findings into insights on portfolio risk and hedging performance.

Manulife — May 2026 – Aug. 2026
Business Technology Analyst Intern — *Toronto, ON*

- Collaborated with senior architects and engineers to design an AI-enabled regulatory reporting solution projected to improve processing efficiency by up to 80%.
- Optimized an internal database solution, reducing data extraction time by 60%.
- Analyzed business processes, system dependencies, and technical risks; translated findings into process flows and briefing materials to support stakeholder decisions and implementation planning.

Otomakeit Solutions — Sept. 2024 – Dec. 2024
Software Developer Intern — *Remote*

- Developed Python automation tools to streamline recurring workflows and integrated external APIs to retrieve, process, and format structured data for downstream use.
- Tested, debugged, and refactored application code, addressing authentication, request failures, and data-formatting issues to improve reliability and maintainability.

Clubs & Projects

FARMSA – Incoming Quant Analyst | *Financial Engineering* — Winter 2027

- Originally was supposed to join in Fall 2026 but deferred my start to Winter 2027 to avoid a conflict with my current role.

Federal Funds Rate Decision Prediction Model | *Python, scikit-learn* — GitHub

- Built a random-forest model using 38 policy and Treasury-market features across 273 FOMC meetings to predict interest-rate decisions, using strictly lagged data to prevent look-ahead bias.
- Achieved 90.9% accuracy and 0.919 macro F1 on a 55-meeting chronological holdout after five-fold time-series cross-validation.

Vision – Financial Statement Analyzer | *Python, pandas, SEC EDGAR* — GitHub

- Automated the extraction and standardization of public-company financial statements and market data using SEC EDGAR, pandas, and yfinance, creating structured datasets for repeatable financial analysis.

Competitions

Bloomberg Trading Challenge | — Leaderboard

- As of Week 3 of the challenge my team sits in the top 10% of teams worldwide, 305/3,343. leaderboard attached.

Skills

Excel & Reporting: Interactive dashboards, PivotTables, XLOOKUP, INDEX/MATCH, financial reporting, PowerPoint
Programming & Data: Python, SQL, pandas, scikit-learn, API integration, data extraction and validation, workflow automation
Financial Analysis: Asset-liability management, derivatives, market risk analysis, reserve sensitivity analysis, financial statement analysis, monetary policy analysis
Business Collaboration: Stakeholder communication, requirements gathering, process documentation, cross-functional collaboration
